

New at Galter: The Metrics Guide

Curious about h-indexes and journal impact factors? Confused about field citation ratios and altmetrics scores? Galter Library's [Metrics & Impact Core](#) has unveiled a [Metrics Guide](#), featuring a variety of metrics and indicators to help assess research outputs. Many of these metrics are bibliometrics, or citation-based metrics, and can be categorized into three silos:

- Author-level metrics attempt to measure the citation impact of an individual (e.g. h-index)
- Article-level metrics attempt to measure the citation impact of a single paper or group of papers (e.g. raw number of citations)
- Journal-level metrics attempt to measure the citation impact of journals (e.g. journal impact factor)

Learn more about the types of metrics with use examples in the [Metrics Guide](#).
