Collaboration Conference Rooms

Three of the conference rooms in the Learning Resources Center on Level 1 (1-411, 1-412, and 1-413) and two of the conference rooms on Level 2 (2-013 and 2-282) contain additional technology that makes them collaboration conference rooms. Each room contains a 50-inch Panasonic flat screen plasma display either mounted to the wall of each room or set on a cabinet against the back wall. The remotes for the plasma displays are available for check out at the front circulation desk. For video, the displays can be connected directly to Windows machines and, with a converter cable available at the front circulation desk, to a number of Mac models. You can also connect an MP3 player. Instructions on operating the display are available in the room.

In addition, Room 2-282 contains a CopyCam Pro Image Capturing system with a white board. The CopyCam system allows you to capture the images on the whiteboard for later use. Images can be saved to a USB drive or to a dedicated website. Instructions for using the CopyCam are available in the conference room.

The remainder of the conference rooms on Level 2 (2-004, 2-021, 2-027, 2-030 and 2-284) each contain a Mobile Monitor Cart (MMC), which is a 32-inch flat screen display on wheels. Each MMC has a VGA connection cable that should work with most Windows laptops; Mac users should bring an adapter or check one out from the front desk of the library. Audio cables are also available.

Note: MMCs can be removed from conference rooms by users for use elsewhere in the library. It is recommended that users reserve the MMC while reserving a conference room if they wish to have an MMC available to them while using the room. Only Feinberg School of Medicine affiliates can reserve rooms and equipment.

Please call the circulation desk at 312-503-8126 to reserve the rooms.
