

## Top Databases

---

Are you wondering where to find articles? Here are a few of our most commonly-used databases. For more, use [GalterSearch](#).

- [CINAHL with Full Text](#): Nursing and allied health literature.
- [Clinical Pharmacology](#): Drug information resource that includes the NMH hospital formulary.
- [Cochrane Library](#): A suite of databases that includes the Cochrane Database of Systematic Reviews and the CENTRAL Register of Controlled Trials.
- [Embase](#): A biomedical literature database, considered to be strong on pharmacology literature.
- [Journal Citation Reports](#): A resource for finding out journal impact factors.
- [Ovid MEDLINE](#): Access to the National Library of Medicine's biomedical literature database, using the Ovid search engine.
- [PubMed](#): Access to the National Library of Medicine's biomedical literature database, using the PubMed search engine.
- [PsycINFO](#): Psychology and psychiatry journal literature and book chapters.
- [Scopus](#): Database of abstracts and citations that covers the fields of science, technology, medicine, social science, arts and humanities.
- [Web of Science](#): Multidisciplinary database, commonly used for cited reference searching or "who's citing whom."

## GalterSearch

You can also do searches for articles and book content directly in [GalterSearch](#).

Run your search and click on the **Articles** link at the top of the results set. This will take you to Primo Central, a multi-database engine that searches millions of journal articles and selected e-books. To search inside medical e-books, we recommend using a [book collection](#) such as Access Medicine, ClinicalKey, Stat!Ref or Books@Ovid.

---

## Document Delivery for Articles not Available at Galter Library

If you are unable to access an article because (a) we don't own the journal or (b) the journal is located at an NU Evanston library or Oak Grove, our off-site storage facility, then use our Document Delivery service.

There are two ways to access the library's document delivery system. For both, you will need a NetID and password.

1. *Recommended*: Find the article you need in PubMed, click the purple Find it @ NU link on the abstract page, and use the Interlibrary loan option on the next screen. This method populates the request form for you.

2. Use the [Order an Article or Book](#) link in the Popular Pages section of the library's home page. This method pulls up a blank form that you must complete to make the request.
