NIH Grants, Public Access Policy, and Compliance Resources

Galter Library Guides

Galter Library has several guides and an FAQ dealing with the NIH Public Access Policy compliance issues and NIH biosketches:

NIH Public Access Policy:

1. NIH Public Access Policy guide
2. NIH Public Access Policy FAQs from Researchers

NIH Biosketches:

1. Creating Biosketches with SciENcv and My Bibliography
2. Writing About Your Impact in the NIH Biosketch
3. NIH Biosketch: Contributions and Capabilities

Classes and Training from Galter Library

Galter has two classes available:

1. NIH Public Access Policy and Publication Management with My NCBI
2. NIH Biosketches with SciENcv and My Bibliography

When one of these classes is scheduled, you will see schedule and registration links from the class description page.

You don't have to wait for a scheduled class, though, and you don't even have to come to the library: You can request an individual or group consultation or class from the links above. Galter Library will bring the class to your department or office, to suit your schedule.

Expert assistance is available

Do you have questions on linking your grants to publications in My NCBI? About populating the RPPR with publications? About the new NIH biosketch format?
Pamela Shaw, Biosciences & Bioinformatics Librarian, holds the NIH Public Access Compliance Report Role (PACR) for Northwestern University. She is available to answer questions regarding publication management with My NCBI, biosketch formats and manuscript compliance with NIH public access policies.

If it's just a quick phone call, an email or an in-person drop-in visit, Pamela can help you with your questions about compliance with the NIH Public Access policy.

Karen Gutzman, Impact and Evaluation Librarian, provides expert recommendations on ways to write about your impact in your biosketch, and can direct you how to find bibliometric citation data to include in your contributions to science (NIH biosketch Section C).
